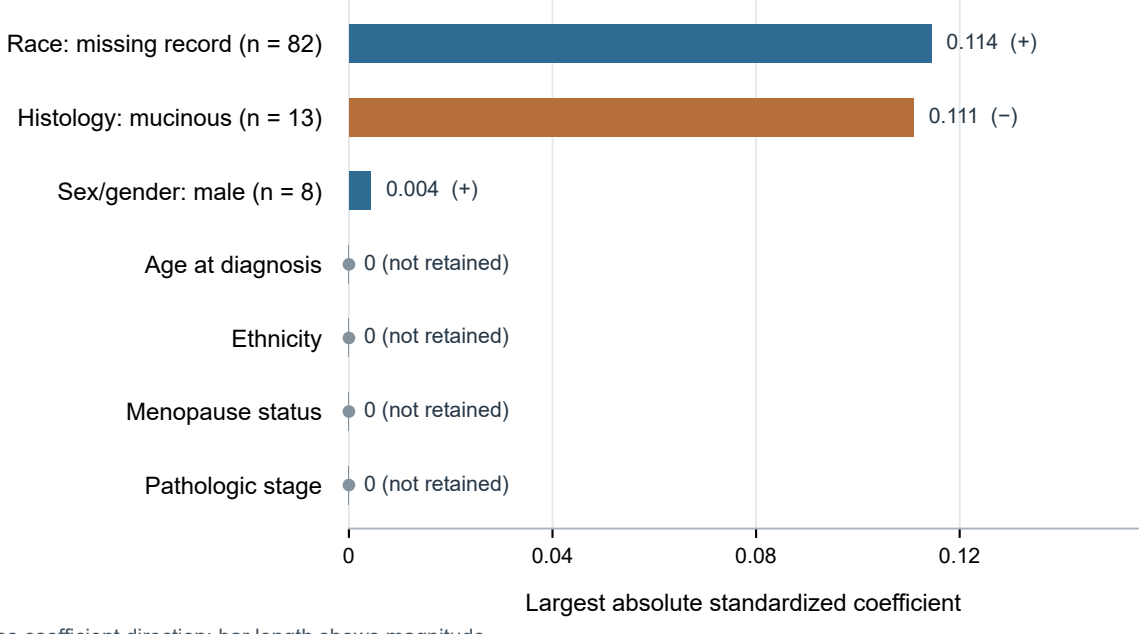
LASSO feature ranking

HER2-positive vs HER2-negative among HR-positive patients

571 patients · One-standard-error model · C = 0.10



+ / − indicates coefficient direction; bar length shows magnitude.

For categorical features, the largest term is shown. Zero-score features are tied.

Nested cross-validation AUC = 0.514 (near chance). Selection was unstable.

Missing race is a missing-data indicator. These are not causal impact estimates.
